PROJECT PLANS AND SPECIFICATIONS

The estimate for the replacement library was prepared from sketch floor plans prepared by Polshek Partnership Architects, program information prepared by Dubberly Garcia and information received during telephone conversations with Jack Phillips of Polshek Partnership Architects.

The estimate for the renovations to the existing library building was based upon plans and sketches prepared by Phillip Swager Associates, program information prepared by Phillip Swager Associates and Dubberly Garcia and conversations with Dan Moore of PSA Dewberry

ESTIMATE PRICING

The pricing used in the estimate is based upon the following general assumptions:

- The project will be competitively bid by a minimum of five general contractors each receiving competitive bids from their subcontractors.
- The existing library will be vacated prior to the renovations commencing.

METHODOLOGY

As the information available at this time is very conceptual in nature, the estimates are based upon the assumption that buildings when complete will be of the highest quality both functionally and aesthetically. It is recognized that both the new building option and the renovation options could in all probability be constructed at less cost than indicated in the estimate with a reduction in the quality of the building fabric.

While the scheme to renovate the existing library may be restricted somewhat by a desire to maintain its existing façade and structure, the estimate assumes that the general quality, level of finish and sophistication of mechanical and electrical services will be similar to the new building option.

The unit rates for material and labor are based upon historical records. The level of pricing reflects the probable construction costs obtainable in the Washington DC area at the time the estimate was prepared. The estimate is a determination of fair market value for the construction work. It is not a prediction of the low bid. It assumes competitive bidding as stated above. Experience indicates that participation of a smaller number of bidders or lack of competitive subcontractor bidding may result in less competitive bids.

As Project Cost Inc. (PCI) has no control over the cost of labor, material and equipment or the competitive conditions at the time of the bid, this estimate is based upon industry practice and professional experience and represents PCI's best judgment as a professional construction consultant familiar with the industry. However, PCI does not guarantee that the proposals, bids or construction cost will not vary from opinions of probable costs prepared by us.

SCOPE OF THE WORK

The replacement library option allows for the construction of a building of approximately 365,000 gross square feet and associate site improvements. A separate estimate has been included to allow for the construction of a basement garage of approximately 55,000 gross square feet under the footprint of the proposed main building together with an access ramp.

PCI: 26039

June 12, 2006

The renovation option allows for the complete renovation of the existing public library including replacing all of the glazing systems, refinishing the exterior steel spandrel panels, mullions and column casings. It also allows for complete replacement of all mechanical and electrical systems, elevators and the addition of escalators.

EXCLUSION

- Design fees and expenses
- Project management fees and expenses
- Permit fees, taxes or assessments
- Owner supplied insurance costs
- Bidding contingency allowance
- Furniture, furnishings and equipment other than as specifically included in the estimate
- Owner's soft costs

ESCALATION ALLOWANCE

An escalation allowance of 26.25% has been included based upon an anticipated mid point of construction in the 2nd quarter of 2010 and an average annual escalation rate of 6%.

An escalation allowance is intended to reflect two variable predictions of future conditions. First, inflation, which takes into account the market forces of supply and demand on the price level of construction materials and labor. Second, construction market conditions, which affect the level of profit and productivity that contractors use in the submission of their bids.

Escalation is highly speculative and equally unpredictable and therefore should be re-evaluated on a quarterly basis, or more frequently in an unstable market.

DESIGN CONTINGENCY

A 10% design contingency allowance has been included as a line item in this estimate.

The purpose of the inclusion of a design contingency amount is to allow for the following:

- The cost of items which are not yet shown or detailed on the drawings and cannot be measured but are required to complete the design.
- The cost of details and variations from the norm, which the unit priced used in a preliminary estimate, do not reflect.
- Minor design changes or scope increases required as the design evolves.

The design contingency is not intended to cover the cost of extensive design changes or significant scope increases.

CONSTRUCTION CONTINGENCY

A 5% construction contingency allowance has been included in the estimate.

The purpose of a construction contingency is to allow for the cost of minor changes that inevitably occur during the construction process. It is not intended to cover the cost of significant scope changes.
